1. **Create a IPL ticket booking form to accept spectator details.**

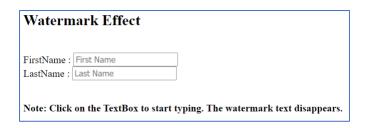

- All text fields are mandatory
- EmailID and Confirm EmailId field values have to be same.
- Cost of ticket will be picked up, based on the stand and floor selected. Use the table provided to select the cost. The field cannot be an editable field.
- If all the data is valid show an alert "All data entered correctly"

- Depending on Stand and floor level selected, cost of ticket would be:

| Stand	Floor	Charges (In Rs)
Platinum Gallery	Not applicable	25000
Super Hospitality Stand	Not applicable	20000
North West Stand	First floor	6000
North West Stand	Second floor	2000
East Stand	First floor	3000
East Stand	Second floor	1000

- **Make use HTML, HTML5, Javascript, CSS**

jQuery assignment:

1. Create the following HTML with data in fields that behave like placeholders. But they ARE NOT HTML5 placeholders!

When user begins entering text in text field, the watermark must go away. Like this:

2. Create a jQuery webpage which accepts Shipping address and billing address from the user. If the billing address and shipping address were same copy the shipping address details to billing address and make it readonly
